Fundamentals of Paramedic Practice Class Professional

This new book provides evidence based guidelines for the immediate clinical management of major trauma. It has been written by clinicians with many years of trauma experience, and endorsed as authoritative by Trauma Care (UK). The UK now has highly effective trauma systems. Clinical developments include the introduction of damage control resuscitation, tranexamic acid, blood product resuscitation, novel hybrid resuscitation and an emphasis on the control of major external haemorrhage as part of a new ABCDE approach. Consequently, more individuals with major trauma are surviving than ever before. Optimal pre-hospital care is essential for improved survival rates and reduced morbidity.

A Systems Approach John Wiley & Sons

This book addresses the theoretical elements of paramedic courses including psychology and sociology and provides clear links to practice.

A case-based guide with expert commentary *Challenging Concepts in Respiratory Medicine*, deals with contemporary clinical scenarios in respiratory medicine. Each chapter is based around a real-life case, and interspersed with the most up-to-date evidence, management strategies, guidelines and controversies in management. As the reader works through each case there are a number of 'Clinical Tips', 'Learning Points' and 'Landmark Trial Summaries' to enhance the learning process along with an 'Expert Commentary' written by a nationally or internationally-renowned expert in that

particular field. This will provide a unique inside track on how the experts approach these types of challenging cases. The approach taken in this series is highly attractive to those in training preparing for their specialist exams.

The Mental capacity Act 2005 provides a statutory framework for people who lack the capacity to make decisions for themselves, or for people who want to make provision for a time when they will be unable to make their own decisions. This code of practice, which has statutory force, provides information and guidance about how the Act should work in practice. It explains the principles behind the Act, defines when someone is incapable of making their own decisions and explains what is meant by acting in someone's best interests. It describes the role of the new Court of Protection and the role of Independent Mental Capacity Advocates and sets out the role of the Public Guardian. It also covers medical treatment and the way disputes can be resolved.

This is the full reference edition of the UK Ambulance Services Clinical Practice Guidelines 2013. The book has been produced for the Association of Ambulance Chief Executives and the Joint Royal Colleges Ambulance Liaison Committee. The 2013 Clinical Practice Guidelines provide guidance for NHS paramedics; although the principles are applicable to the work of all pre-hospital clinicians. The guidelines are an important part of clinical risk management and ensure uniformity in the delivery of high quality patient care. It provides pre-hospital clinicians with essential information on drug dosages, treatment algorithms and management plans. As such, they form the basis for UK paramedic training and education. BMA Book Award Review Panel - "This works really well as a textbook for pre-hospital care. This is a great book: it is hard to find any weaknesses other than that the

editorial board will need to update the guidelines at regular intervals. It is a really useful, easy to use, multi-author, reference text for pre-hospital care. The guidelines are useful, up-to-date and evidence based. The book is easy to use with tabled sections, which are similar to the pocket book version. The index is accurate and easy to use. I particularly like the Page for Age sections for guidelines to treat children from newborns to age 11 years. The section on medication is also easy to use. There is a pocket book version available which is shorter, but much easier to use in the field (UK Ambulance Services Clinical Practice Guidelines 2013 Pocketbook ISBN 9781859593653). The two books work really well together to provide a useful field reference book and a larger text book. I would highly recommend both these books for anyone interested in pre-hospital care."

Specifically designed to enhance your knowledge and skills within generalist palliative care, this informative textbook provides a comprehensive overview of the principle areas you may encounter whilst working with adult palliative and end-of-life patients, and their families. The development of the text has been backed by Macmillan Cancer Support and each chapter has been written by a range of specialist and generalist authors. The topics covered include approaches to palliative care and symptom management in a wide range of conditions and populations, with chapters linked to case studies to encourage interactive learning and understanding. Communication skills are also highlighted to help aid confidence when engaging in open and difficult conversations. The text is in line with Scottish Palliative Care Guidelines and the NES Framework for Palliative and End of Life Care. The book may either be used as course reading for relevant training programmes, such as the Enhanced Palliative Care course, as well as by healthcare professionals hoping to develop their skills and practice. It is aimed at anyone involved in management and prescribing within non-specialist palliative care, both in hospitals and in the community, including paramedics, nurses, doctors, pharmacists, and other key health professionals.

"This brand new title in the ABC series provides a comprehensive overview of pre-hospital medicine, including transport, patient assessment, emergency care systems, and pre-hospital interventions. With pre-hospital care being the start of the "trauma chain", the treatment patients receive on-scene as well as en-route can be life-saving, and this new title is invaluable for all staff involved in emergency and pre-hospital medicine"--Provided by publisher.

So much emphasis in paramedic practice is placed on saving lives, and so how can you provide the best care for patients who are approaching the end of theirs? Knowing when it is appropriate to transfer palliative and end of life patients to hospital can be challenging as there are often many complex factors at stake which can have an impact on both patients and their families. Digging deep into the ethical and clinical aspects of working with palliative patients as a paramedic, this book is the go-to resource to enable you to act within the patient's best interests and provide the most

appropriate and effective care. Key features include: Twenty-four case studies covering a range of relevant topics to help apply principles to your own practice Clinical information on symptom control and pain management Written specifically for paramedics, by a range of specialist authors Designated chapters on the role of the paramedic in palliative care, palliative care emergencies and personal resilience Full-colour diagrams throughout. Since the onset of the COVID-19 pandemic, we are all more aware of the importance of patient-centred palliative care; this book is full of tips and techniques to help you feel more confident in ensuring patients not only die 'well' but also live with dignity and comfort.

This bestselling undergraduate level book is an ideal resource for student paramedics looking for an excellent introduction to the main theoretical subjects studied in paramedic courses, and links practice issues to the all-important theory base. The chapters bring to life a wide variety of academic subjects, making complex subjects easily readable and encouraging reflection on how theory fits with practice. This 3rd edition has been expanded throughout and includes five new chapters on research and evidence-based practice, human factors affecting paramedic practice, developing resilience, caring for people with dementia, and public health perspectives. This new edition also covers: • Ethics and law for the paramedic • Reflective practice and communication • Professional issues, including clinical audit and governance and anti-discriminatory practice • Psychological perspectives on health and ill health • Social factors • Care of vulnerable adults and end of life care • Safeguarding children • Managing change, decision making and leadership theory Written by a team of experienced paramedics, specialist health care professionals and doctors from across the UK, the book includes numerous links to practice, a wide selection of case studies and examples which encourage you to 'stop and think' and reflect upon your practice experience. Blaber's Foundations for Paramedic Practice: A theoretical perspective, 3rd Edition is a core text for student paramedics and a valuable resource for students of all allied health professions. "This book should be considered essential reading material for student paramedics endeavouring to understand the vital core concepts that underpin paramedic science. This clear, concise and user-friendly text is also invaluable for newly qualified paramedics, experienced paramedics looking to continue their own professional development and those acting as Practice Educators". This new open access edition supported by the Fragility Fracture Network aims at giving the widest possible dissemination on fragility fracture (especially hip fracture) management and notably in countries where this expertise is sorely needed. It has been extensively revised and updated by the experts of this network to provide a unique and reliable content in one single volume. Throughout the book, attention is given to the difficult question of how to provide best practice in countries where the discipline of geriatric medicine is not well established and resources for secondary prevention are scarce. The revised and updated chapters on the epidemiology of hip fractures, osteoporosis, sarcopenia, surgery, anaesthesia, medical management of frailty, peri-operative complications, rehabilitation and nursing are supplemented by six new chapters. These include an overview of the multidisciplinary approach to fragility fractures and new contributions on pre-hospital care, treatment in the emergency room, falls prevention, nutrition and systems for audit. The reader will have an exhaustive overview and will gain essential, practical knowledge on how best to manage fractures in elderly patients and how to develop clinical systems that do so reliably.

Human factors is a scientific discipline which examines the interactions between components of a system, whilst aspiring to improve system performance and human well-being. Paramedics are often the first on scene in emergency and urgent situations, and the quality of care that patients receive is dependent on the performance of the paramedic, often working alone or as part of a small team and frequently in challenging environments. This book is an accessible and informative guide to the concepts of human factors and ergonomics in the field of paramedic practice. It shows how an understanding and application of these principles can improve paramedic performance and well-being, and ultimately patient care. The system components of paramedic practice consist of the patient, the environment, the equipment, the paramedic and their team, the organisation

they work in and the wider culture. This book brings together a range of specialist contributors to consider each of these components in detail through chapters which explore situational awareness, human-centred design, the well-being of the paramedic, systems thinking and safety culture among other topics. It aims to provide paramedics with practical advice and the knowledge of human factors that they need to make their first contact with a patient in need as safe and effective as possible for all involved.
