Every day in the United States, over two million men, women, and children step onto an aircraft and place their lives in the hands of strangers. As anyone who has ever flown knows, modern flight offers unparalleled advantages in travel and freedom, but it also comes with grave responsibility and risk. For the first time in its history, the Federal Aviation Administration has put together a set of easy-to-understand guidelines and principles that will help pilots of any skill level minimize risk and maximize safety while in the air. The Risk Management Handbook offers full-

color diagrams and illustrations to help students and pilots visualize the science of flight, while providing straightforward information on decision-making and the risk-management process.

loves to tell people that she lost her arms in an alligator wrestling match, or a wildfire in Tanzania, but the truth is she was born without them. And when her parents take a job running Stagecoach Pass, a rundown western theme park in Arizona, Aven moves with them across the country knowing that she'll have to answer the question over and over again. Her new life takes an unexpected turn when she bonds with Connor, a classmate who also feels isolated because of his own disability, and they discover a room at Stagecoach Pass that holds bigger secrets than Aven ever could have imagined. It's hard to solve a mystery, help a friend, and face your worst fears. But Aven's about

Volume 2 of The Thinking Pilot's Flight Manual carries on the widely praise, penetrating, and clear-headed approach of Volume I, addressing matters of importance to pilots that ordinary flight training manuals never touch. It delves into everything from the realities of making the go/no-go decision

during the takeoff roll, nailing spot landings, which emergencies to practice, and how to take babies and kids flying. It explores how we scare our passengers without realizing it, IFR training in IMC, and takes a hard look at spin training. Rick Durden is one of three 2015 recipients of the Endeavor Award, honoring volunteer pilots who have made significant contributions to flying to serve the public. For 25 years he has made flights in remote areas of the U.S. and Central America in support of conservation. He is an Airline Transport-rated pilot with experience in over 200 types of airplanes, a practicing aviation attorney who has been involved in hundreds of aircraft

accident cases, writer, aviation magazine editor, safety counselor, and flight instructor.

This book is an attempt to present under one cover the current state of knowledge concerning the potential lightning effects on aircraft and that means that are available to designers and operators to protect against these effects. The impetus for writing this book springs from two sources- the increased use of nonmetallic materials in the structure of aircraft and the constant trend toward using electronic equipment to handle flight-critical control and navigation function.
