Immunofixation electrophoresis is the process of separating proteins in the blood (serum) or urine using an electric current to move them across a thin layer of gel. It is used to identify the presence or absence of abnormal proteins and to detect, diagnose and monitor the course and treatment of conditions associated with these proteins, including multiple myeloma and other related diseases. (Lab Test Online UK). This manual guides practitioners through the technique and interpretation of immunofixation electrophoresis. Beginning with an introduction, the book provides a step by step description of the techniques, instruments, electrophoresis patterns and their interpretation, stains used, and diseases that may be diagnosed with this process. More than 200 full colour images and illustrations enhance learning. Key points Step by step guide to immunofixation electrophoresis Describes different methods and their interpretation Covers diseases that may be diagnosed using electrophoresis, including multiple myeloma Includes more than 200 full colour images and illustrations (*methods and Interpretations*). "About this book : • All MCQs from Haematology, Microbiology, Biochemistry, Histopathology, Molecular Biology etc. • Previous Questions from AIIMS, PGIMER, JIPMER. Vast syllabus of Medical Laboratory Technology can be reviewed in short period "

For DMLT Student F.A. Davis

This textbook, which gives completely updated information on the state-of-art of modern laboratory technology, effectively and comprehensively meets the requirements of students of medical laboratory technology [BSc and BSc (Hons)]; and laboratory technicians (diploma holders), employed in various clinical laboratories and institutions who wish to renew/update their knowledge on the current topics/subjects comprehensively included in the book. Diagnostics play a prominent role in the field of medicine. Without proper diagnosis, proper conclusion regarding medical treatment and surgery cannot be advised. Appropriate clinical laboratory is set up to carry out medical laboratory technical work in various departments in hospitals and medical institutions. Similarly preparation of reagents of purest quality is also essential. Students undergoing training of medical laboratory technology learn the techniques of collection of samples, their processing and diagnosis, identification of various fungal infections and diagnosis of microbial infections by serological methods. In addition, students are given training in the use of safety measures while handling infected materials. This textbook has several new dimensions of clinical biochemistry. It presents the measurement of various constituents of blood and other biological fluids and comprehensive coverage of principles and procedures. This book aims to enable the students to carry out routine clinical laboratory investigations (blood, urine, CSF, biopsies and other fluids). Student should be able to provide technical help for selected sophisticated haematological techniques with adequate knowledge of various principles. Advances in diagnostic methodologies and instrumentation have been included. This subject is aimed at preparing the students to prepare stained tissue sections of various types (paraffin, frozen) and immunohistochemistry. Emphasis has been given to quality control, which is essential to begin for the analysis.

This book is a practical guide to histopathological and cytopathological techniques for disease detection and diagnosis. Divided into fifteen chapters, the text begins with an overview of cells and tissue, discussion on microscopy, and an introduction to the importance of histopathology. The following sections cover different techniques, each describing basic theory, procedure, potential difficulties, and then concluding with important subjective and objective questions. Recent developments in the field including immunochemistry, automation, and microarray, are also discussed. Each technique is explained with the help of diagrams and figures to assist understanding. Key points Practical guide to histopathological and cytopathological techniques Presented in a step by step approach, with illustrative diagrams and figures Discusses recent advances and procedures Includes chapter on safety in the histopathology laboratory

Essentials of Blood Banking JAYPEE BROTHERS MEDICAL PUBLISHERS PVT. LTD.

This is the first book of its type meant for medical laboratory technology students, covering all theoretical and practical aspects related to pathology. It is written in a simple manner so that the student can grasp the subject and can recall it easily while writing exams. Wherever required, flowcharts, colour diagrams, and photomicrographs have been introduced in each section. Technical aspects in relation to laboratory medicine have been dealt with accurately. Covered in 84 chapters, the book provides concise information on each topic, especially from examination point of view. The book covers: - Practical and technical aspects of the hematology laboratory, including stains, bone marrow examinations, and coagulation profiles. - Histological techniques, including routine stains, special stains, tissue processing, and fixatives. - Histopathology and cytopathology, including automation, specimen management, and electron microscopy. - Laboratory management, including quality control, job analysis, record keeping, and inventories. - Clinical pathology, including fluid, urine and semen analysis. - Transfusion medicine and immunohematology, including blood grouping, crossmatching, and plasmapheresis.
