Springer Science & Business Media

This book provides important information about the development of psychology as a discipline in Asia. Several research papers related to organizational psychology and the influence of psychology on quality of life in countries throughout

Asia are included. The papers which appear herein were originally presented at the 3rd Convention of the Asian Psychological Association in Darwin, Australia during July, 2010; the 4th Convention of the Asian Psychological Association in Jakarta, Indonesia during July, 2012; and the International Conference on Industrial and Organizational Psychology at the National Institute of Psychology in Islamabad, Pakistan during April, 2012. The information presented here provides a valuable window into how psychology is taught and practiced throughout Asia, especially in the work place. Indigenous trends in research,

theory and application are provided by authors who are native to, live and teach in the countries represented in the studies reported here. It is a must-read, not only for those in academic psychology and higher education, but also for those in business who are affected by changes in globalization of business practices. Psychologists, counselors, educators, and those with research interests in social sciences and cross-cultural research will find a wealth of current information. *Secondary Social Studies for Pakistan* Springer Science & Business Media

The international multi-topic conference IMTIC 2008 was held in Pakistan during April

11-12, 2008. It was a joint venture between Mehran University, Jamshoro, Sindh and Aalborg University, Esbjerg, Denmark. Apart from the two-day main event, two workshops were also held: the Workshop on Creating Social Semantic Web 2.0 Information Spaces and the Workshop on Wireless Sensor Networks. Two hundred participants registered for the main conference from 24 countries and 43 papers were presented; the two workshops had overwhelming support and over 400 delegates registered. IMTIC 2008 served as a platform for international scientists and the engineering community in general, and in particular for

local scientists and the engineering community to share and cooperate in various fields of interest. The topics presented had a reasonable balance between theory and practice in multidisciplinary topics. The conference also had excellent topics covered by the keynote speeches keeping in view the local requirements, which served as a stimulus for students as well as experienced participants. The Program Committee and various other committees were experts in their areas and each paper went through a double-blind peer review process. The conference received 135 submissions of which only 46 papers were selected for presentation: an

acceptance rate of 34%.

FinTech, an abbreviated term for financial technology, is a digital revolution changing the way banking and financial services are being

used both by individuals and businesses. As these changes continue to take place, the financial industry is focused on technological innovation and feeding into this digital revolution to better serve consumers who are looking for easier ways to invest, transfer money, use banking services, and more. FinTech is increasing accessibility to financial services, automating these services, expanding financial options, and enabling online payments and banking. While the benefits are being continually seen and this technology is becoming more widely accepted, there are still challenges facing the technology that include security

concerns. To understand FinTech and its role in society, both the benefits and challenges must be reviewed and discussed for a holistic view on the digital innovations changing the face of the financial industry. The Research Anthology on Concepts, Applications, and Challenges of FinTech covers the latest technologies in FinTech with a comprehensive view of the impact on the industry, where these technologies are implemented, how they are improving financial services, and the security applications and challenges being faced. The chapters cover the options FinTech has unlocked, such as mobile banking and virtual

transactions, while also focusing on the workings of the technology itself and security applications, such as blockchain and cryptocurrency. This book is a valuable reference tool for accountants, bankers, financial planners, financial analysts, business managers, economists, computer scientists, academicians, researchers, financial professionals, and students.

There has been growing interest on business models among academics and practitioners in recent years, as business model describes how an organization creates, distributes and

captures value and, therefore, can be considered the DNA of the organization. Recently, factors related to digital transformation, the vital role of sustainability and social aspects, along with an increasing globalization, have pushed towards radical transformations in business models. This book aims to further our knowledge on business model innovation in new contexts of analysis and with new perspectives of investigation. Insights from business model innovation are presented from studies focusing on start-ups, small businesses and large businesses to provide a bigger picture on new dynamics connected to

digital transformation, sustainability, new global relationships. As such, the scope is on new ways to create value, new components and dynamics (such as digitalization and sustainability) concerning the key elements of the business model (value creation, value configuration and value capture), and new relationships between actors that may foster business model innovation. It represents a valuable resource for practitioners willing to innovate business models, academics aiming at finding new research lines, and students keen to learn more about business models.

This volume is a compilation of articles that shed light on psychopathology, how the one struggling with it experiences its implications, and how it affects everyday life. For one to be categorized as exhibiting positive mental health, an individual should not experience psychopathology, and additionally exhibit high levels of emotional well-being as well as high levels of psychological and social functioning. The dual-factor model of mental health suggests that enhancing positive mental health and alleviating psychopathology do not automatically go together and are not opposite of one another. There is accumulating evidence

that psychopathology and positive mental health function along two different continua that are only moderately interrelated. However, to know what wellbeing is, understand good mental health, and enhance adaptive functioning, we need to explore and understand psychopathology, and how it affects us. The volume is divided into three conceptual sections: The Experience of Psychopathology, which is devoted to describing what it is and how it is experienced; The Effect of Psychopathology on Everyday Life, describes various effects that psychopathology has on the daily life of the

sufferer; Coherence, Resilience and Recovery, which focuses on dealing with it, coping with the symptoms, and developing resilience.

The chapters in this book were originally published in The Journal of Psychology.

For students studying program evaluation, project planning, or tests and measurements. For professionals new to the field. A highly esteemed and comprehensive overview of program evaluation that covers common approaches, models, and methods. As schools

and other organizations increase their demand for information on program effectiveness and outcomes, it has become even more important for students to understand the prevalent approaches and models for evaluation, including approaches based on objectives and logic models, participative, and decision-making approaches. The new tenth edition of Program Evaluation not only covers these vital approaches but also teaches readers how to best mix and match elements of different approaches to conduct optimal evaluation studies for individual programs. Helping both students as well as professionals who are new to the field, this text provides practical

guidelines for conducting evaluations, from identifying the questions that the evaluation should address, to determining how to collect and analyze evaluative information, to ascertaining how to provide evaluative information to others. Making extensive use of checklists, examples, and other study aides, Program Evaluation teaches students how to effectively determine the central purpose of their evaluation, thus making their evaluation more valid, more useful, and more efficient. The revised edition of the text includes new approaches to program evaluation, an expanded discussion of logic models, added

information on mixed models, and, as always, updated coverage of the most current trends and controversial issues in evaluation."

Children in today's world are inundated with information about who to be, what to do and how to live. But what if there was a way to teach children how to manage priorities, focus on goals and be a positive influence on the world around them? The Leader in Me is that programme. It's based on a hugely successful initiative carried out at the A.B. Combs Elementary School in North Carolina. To hear the parents of A. B. Combs talk about the school is to be amazed.

In 1999, the school debuted a programme that taught The 7 Habits of Highly Effective People to a pilot group of students. The parents reported an incredible change in their children, who blossomed under the programme. By the end of the following year the average end-of-grade scores had leapt from 84 to 94. This book will launch the message onto a much larger platform. Stephen R. Covey takes the 7 Habits, that have already changed the lives of millions of people, and shows how children can use them as they develop. Those habits -- be proactive, begin with the end in mind, put first things first, think win-win, seek to understand and then to be understood, synergize,

and sharpen the saw -- are critical skills to learn at a young age and bring incredible results, proving that it's never too early to teach someone how to live well.

was first written to help language professionals understand the complex nature of

reading. Now in a thoroughly updated and improved second edition, the book expands connections from research on

reading to instructional practices and teacher-initiated action research. Offering an updated overview of reading theory, it summarises key ideas

and issues in first and second language contexts. In addition to providing insightful research analyses, Grabe and Stoller offer practical advice for practitioners and researchers, including evidence-based teaching ideas and a multi-step iterative process for conducting meaningful action research on reading-related topics. The volume outlines 29 projects for teacher adaptation and use, as well as numerous new or substantially expanded resource materials that can be used for both action research and classroom instruction. Learning aids featured throughout the volume include ♦ key concept boxes and a glossary of key terms ♦ quote boxes highlighting

critical issues in the field ♦ resource lists of relevant journals, books and websites Fully revised throughout, with a range of new exemplary L1 and L2 research studies and an entirely new chapter on the move from research implications to instructional applications, this second edition of Teaching and Researching Listening is an invaluable resource for teacher trainers, practicing teachers, materials writers and researchers alike.

This book presents an overview of the chemistry, geology,

toxicology and environmental impacts of arsenic, presenting information on relatively common arsenic minerals and their key properties. In addition, it includes discussions on the environmental impacts of the release of arsenic from mining and coal combustion. Although the environmental regulations of different nations vary and change over time, prominent International, North American, and European guidelines and regulations on arsenic will be reviewed. Includes information on recent environmental catastrophes (e.g. Bangladesh and China) A thorough discussion of the arsenic cycle, including the

cosmological origin of arsenic Includes Appendices providing extensive glossary and measurement conversion tables

 With the advent of portable and autonomous computing systems, power consumption has emerged as a focal point in many research

projects, commercial systems and DoD platforms. One current research initiative, which drew much attention to this area, is the Power Aware Computing and Communications (PAC/C) program sponsored by DARPA. Many of the chapters in this book include results from work that have been supported by the PACIC program. The performance of computer systems has been tremendously improving while the size and weight of such systems has been constantly shrinking. The capacities of batteries relative to their sizes and weights has been also improving but at a rate which is much slower than the rate of improvement in computer performance

and the rate of shrinking in computer sizes. The relation between the power consumption of a computer system and its performance and size is a complex one which is very much dependent on the specific system and the technology used to build that system. We do not need a complex argument, however, to be convinced that energy and power, which is the rate of energy consumption, are becoming critical components in computer systems in general, and portable and autonomous systems, in particular. Most of the early research on power consumption in computer systems addressed the issue of minimizing power in a given platform, which

usually translates into minimizing energy consumption, and thus, longer battery life.
