Climate Change and Sustainable Urban Development in Africa and Asia SAGE Publications

This two-volume set explores the various ways social media are profoundly changing politics in America. The last decade has seen dramatic changes in the U.S. political process. The advent of social media and other new forms of expression have enabled an unprecedented number of citizens to enter the political arena by expressing their opinions about issues and

candidates in ways that can influence untold numbers of voters and officials. But the vast majority of politicians have not fully grasped how social media has fundamentally changed the process of communication or adjusted to the dramatic shift in political power that is taking place. Written by experts on the intersections of politics, public opinion, and popular culture, this book examines how new media have brought political "power to the people" like never before, provided new channels through which politicians communicate and attempt to influence public opinion, and caused a game-changing shift in political power. Volume one focuses on how savvy politicians are learning to communicate in new ways via new media in order to enhance their political appeal. The

second volume examines the various ways in which individuals or groups who use new/social media are affecting voters' decisions, applying pressure to elected or appointed officials, and influencing the direction of the country.

Social Media and Politics DIANE Publishing

The return to business-as-usual after the economic earthquake that rocked financial markets, wrecked banks and brought to light the grotesque distortions of casino capitalism on people and planet must be resisted. A new form of capitalism is both necessary and possible as some forward-thinking political, business and civil society leaders have now recognised. This book is about the myriad problems that we face and the systemic changes that are

necessary for all enterprises in whatever sector and however constituted to operate within sustainable limits, to lower their ecological footprint, to enhance social equity, and to develop a sense of futurity. Waddock and McIntosh argue that enterprise, innovation and creativity, like conversation, caring and sharing, are part of what it means to be human. They argue that we need to redefine our relationship with commerce to reconcile our relationship with the Earth. The authors see the seeds of economic change in new and fundamentally different forms - in entrepreneurship, networks, governance, transparency and accountability - already being planted and beginning to grow. To nurture these developments, they believe that we

need to learn to "see" in new ways to begin to recognise their worth and to create a sufficiently broad, coherent and integrated social movement for change that can overcome the momentum of the current system. Incremental change - CSR, for example - will not be enough. Deep change is needed in the purposing, goals and practice of business enterprise. Deep change is needed in the ways that we, as humans, relate to nature and natural systems under severe stress from resource overuse and depletion, a quadrupled population during the 20th century, and human impact on climate. And deep change is needed in the ways in which we relate to each other, use our time and build our communities. This book documents some of the changes that are already in

progress and provides optimism that a sustainable enterprise economy geared to innovation, creativity, problem-solving, entrepreneurialism and enthusiasm for life can produce wealth, preserve the natural environment and nurture social capital.

How disruptions and discontinuities caused by the introduction of new technologies often reveal aspects of practice not previously observed. What happens in an established practice or work setting when a novel artifact or tool for doing work changes the familiar work routines? Any unexpected event, or

change, or technological innovation creates a discontinuity; organizations and individuals must reframe taken-for-granted assumptions and practices and reposition themselves. To study innovation as a phenomenon, then, we must search for situations of discontinuity and rupture and explore them in depth. In *Shifting Practices*, Giovan Francesco Lanzara does just that, and discovers that disruptions and discontinuities caused by the introduction of new technologies often reveal aspects of practice not previously observed. After discussing methodological and research issues, Lanzara presents two in-depth studies focusing on processes of design and innovation in two different practice settings: music education and criminal

justice. In the first, he works with the music department of a major American university to develop Music LOGO, a computer system that allows students to explore musical structures with simple, composition-like exercises and experiments. In the second, he works with the Italian court system in the design and use of video technology for criminal trials. In both cases, drawing on anecdotes and examples as well as theory and analysis, he traces the new systems from design through implementation and adoption. Finally, Lanzara considers the researcher's role, and the relationship—encompassing empathy, vulnerability, and temporality—between the reflective researcher and actors in the practice setting.

"This book is an insightful, well-balanced, stimulating SCM Strategy book that clearly tells managers, consultants, as well as educators that the SCM concept is not a fad but a must strategy to gain competitive advantage in today's dynamic global market place. There are three major strengths. First, it is an unprecedented interdisciplinary SCM strategy book that explains how companies obtain, maintain, and even enhance competitive advantages based upon a well-laid SCM strategy. Second, it provides readers a unique, well-balanced framework for SCM strategy formulation. Third, it is a valuable contribution in the

area of SCM in that it does a good job in explaining such a complicated SCM strategy to readers in such a simple manner." —Soonhong (Hong) Min, University of Oklahoma Author of the bestselling text Supply Chain Management, John T. Mentzer's companion book Fundamentals of Supply Chain Management: Twelve Drivers of Competitive Advantage has been developed as a supplemental text for any course dealing with strategy and supply chains. Written in an entertaining, accessible style, Mentzer identifies twelve drivers of competitive advantage as clear strategic points managers can use in their companies. Research from more than 400 books, articles, and papers, as well as interviews with over fifty executives in major global

companies, inform these twelve drivers. The roles of all of the traditional business functions—marketing, sales, logistics, information systems, finance, customer services, and management—in supply chain management are also addressed. Complete with cases and real-world examples from corporations around the world, the book's exemplars will help students and practicing managers to more effectively understand, implement, and manage supply chains successfully. Shifting Genres in Late Antiquity CNET Networks Inc. Open Innovation describes an emergent model of innovation in which firms draw on research and development that may lie outside their own boundaries. In some cases, such as open source software, this research and development can take

place in a non-proprietary manner. Henry Chesbrough and his collaborators investigate this phenomenon, linking the practice of innovation to the established body of innovation research, showing what's new and what's familiar in the process. Offering theoretical explanations for the use (and limits) of open innovation, the book examines the applicability of the concept, implications for the boundaries of firms, the potential of open innovation to prove successful, and implications for intellectual property policies and practices. The book will be key reading for academics, researchers, and graduate students of innovation and technology management. The Power of Comics Routledge InfoWorld is targeted to Senior IT professionals.
