Design is an essential element of business. It maximises the work of internal and external experts. It brings focus to foresight, ideas to innovation and expression to marketing. In short, it helps companies grow and prosper. Yet many businesses ignore the potential of design. They fail to make full use of the competences and skills designers have to offer. One reason for this is that there is no established academic science of design. This book takes steps to fill that gap by offering its own design science – a science called Designology. Designology should embrace a wide range of disciplines, from neuroscience, psychology and sociology to anthropology, ethnology and behavioural science. This book, however, decides to focus on just two of these disciplines – neuroscience and psychology – to demonstrate that design is a science rather than an art, and that designers equipped with the knowledge they offer can provide a credible, expert and, above all,

effective contribution to any business. Designology – the science of connecting a brand to its audience.

Too many believers get sidetracked trying to wrestle with evil powers that aren't really there. Yes, there is spiritual warfare for the believers. But there is also "real world" living, where it's not the Devil trying to destroy us, it's simply seasons of testing. If we pass the test, we move to the next level. If we fail, we take the same course of study again. This book is a look at the life of Joseph and the multiple tests that he took, how he passed, and how we often face the same tests in our daily life.
