MARISA KASH

An Agenda University of Chicago Press
The current socio-economic situation in Africa as a continent is precarious. The continent faces multiple crises that include those of religion, politics, and economics. Each crisis is significant in its own right and together they are mutually reinforcing. One begins to wonder if the

leaders have the will and/or the means to put the continent on a growth trajectory and once and for all address the wide spectrum of inextricably linked development issues. While the significance of politics on religion, or vice versa is recognized, what is more crucial is the impact of politics on economy, and vice versa. This book examines the direction of causality and finds that political instability perpetuates underdevelopment among other things. It is also interesting to

discover that the deleterious effect of political instability is different across sectors. The reader will also observe that a few countries may have benefited from some degree of instability.

Routledge

Russia and many other transition countries are now facing the challenges of opening up, restructuring, and modernizing their economies, which requires addressing numerous institutional weaknesses and supply-side distortions. From a regional

perspective, drawing on the experience of other reforming countries, the papers examine these issues. Aspects addressed include the implications of trade and capital flows, the process of labor market reform, financial market development, productivity growth, and innovation dynamics. The dynamics of the reform process are also studied in the context of new political economy models.

A Political Economy of Post-Industrial Employment and Union Organizing
Routledge

Advances in artificial intelligence (AI) highlight the potential of this technology to affect productivity, growth, inequality, market power, innovation, and employment. This volume seeks to set the agenda for economic research on the impact of AI. It covers four broad themes: AI as a general purpose technology; the relationships between AI, growth, jobs, and inequality; regulatory responses to changes brought on by AI; and the effects of AI on the way economic research is conducted. It explores the economic influence of machine learning, the branch of computational statistics that has driven much of the recent excitement around AI,

as well as the economic impact of robotics and automation and the potential economic consequences of a still-hypothetical artificial general intelligence. The volume provides frameworks for understanding the economic impact of AI and identifies a number of open research questions. Aquaculture Economics and Financing: Management and Analysis provides a detailed and specific set of guidelines for using economic and financial analysis in aquaculture production. By discussing key issues such as how to finance and plan new aquaculture business, how to monitor and evaluate economic performance, and how to manage capital, labor, and business risk, the book equips aquaculture

professionals, researchers, and students with important information applicable to a wide range of business decisions. Chapters address each stage of developing an aquaculture business, including financing, marketing, and developing a business plan to managing cash flows and analyzing financial statements. Each chapter includes a detailed example of practical application taken from every-day experience. Written in straightforward terminology facilitating ready application, Aquaculture Economics and Financing: Management and Analysis is an essential tool for analyzing and improving financial performance of aquaculture operations. Key Features: Provides a practical and comprehensive understanding of aquaculture economics and financing Discusses key issues in business plan development; marketing; monitoring financial performance; and managing cash flow. assets, and business risk features examples of practical application in each chapter Includes an annotated bibliography and webliography detailing key resources and software products available for economic and financial analyses

Capitalism Unleashed Penguin UK
Focusing on the vulnerability and resilience to economic shocks at the household level, this book draws on extensive research activities carried out in two Melanesia countries: the Solomon Islands and Vanuatu. In particular, it identifies the household impacts of the recent food, fuel and economic crises. The contributors also examine resilience by identifying how households responded to these recent economic events in order to cope with their impacts. Findings indicate that households are vulnerable to a range of shocks and often struggle to cope with their impacts. Shocks are making it harder for households to meet their basic needs. Households in Melanesia are facing increasing demands for money, in particular for school fees, basic foodstuffs and customary obligations. Concurrently, there are limited domestic opportunities for formal employment. Traditional social support networks are strong and are an important form of resilience. However, there is evidence that they are disintegrating. Of particular focus are the gendered impacts. Women are found to bear a disproportionate share of the

burden in adjusting to household shocks. The authors highlight key areas in which public policy and development programmes can reduce household vulnerability and increase their resilience to future economic shocks.

Towards the Euro OECD Publishing
Price indexes can be constructed using a “hedonic method” that adjusts for changes in the quality of a product. This handbook sets out best practice for constructing hedonic indexes.

Real and Financial Economic Dynamics in Russia and Eastern Europe Peterson Institute

This edited volume brings together original scientific studies on current economic and developmental issues in the Balkan region, and is composed of papers by 25 authors from seven different countries. The Balkan region has gained significant interest in recent years due to its location and strategic position, representing a doorway to Europe, and the region’s stability and progress have direct consequences on various European countries. Because of this strategic position, there is currently much debate regarding a potential partnership of the Balkan states with the

European Union. This book offers insights into the current economic and developmental status of the countries in this region, offering a series of chapters that analyse the area from a variety of perspectives. It begins with a discussion on the recent history of the region, especially with reference to the former Yugoslavia and its break-up after the turbulence experienced in 1990s. Other sections are complementary to each other in that they offer comparisons of the Balkan states in their economic progress at the micro and macro levels. Topics such as European integration policies and effects, economic transition, regional trade, tax incentive policy, regional capital markets, regional development agencies and systems, remittances and foreign aid contributions, import-export policies, fiscal policies, analysis of regional microfinance, and the tourism sectors are explored in detail throughout the book.

Included in this volume are papers which are recognized as some of the foundations of post-Keynesian Economics, analysing problems set in historical time and starting from 'real world' observations. The book reflects Geoff Harcourt's contribution to economic debate over more than three decades. It also includes intellectual

biographies of some of the most prominent and leading unorthodox economists, such as Kenneth Boulding, Eric Russell and Lorie Tarshis.

The New Development Economics Zed Books

GCE O Level Examination Past Papers with Answer Guides: Economics India Edition Foundation Books

The Economics of War Springer Science & Business Media

Free enterprise is off the leash and chasing new opportunities for profit

making across the globe. After a turbulent century of unprecedented social and technological change, Capitalism has emerged as the dominant ideology and model for economic growth in the richest, most developed countries. But only thirty years ago economic growth was faltering, inflation rising and the Left were arguing for greater state intervention in industry. How did this remarkable transformation happen? And what price have we paid in the process? This accessible and persuasive book challenges the notion of our capitalist destiny. It provides a clear and concise history of the problems facing the economies of Europe, Japan and the US during the latter half of the twentieth century and questions whether capitalism has really brought the levels of economic growth and prosperity that were hoped for. Andrew Glyn then looks at the impact the rapidly developing economies of China and the South are likely to have on the older economies of the North. As the race is on to maintain growth and protect competitive advantage, Glyn asks: is the 'race-to-the bottom' inevitable as the anti-globalisers predict, with welfare states being dismantled to meet competitive

demands? Or is there an alternative model which sees a strong commitment to welfare provision as essential to economic growth? Can we afford not to tackle inequality at home as well as abroad? The Economics Compendium for CSAT Paper 1, State PCS, CDS, NDA & other Competitive Exams Routledge

OUP Oxford
This study argues that the decentralization that has taken place in China since 1980 threatens to undermine the future of reform and perhaps even the state itself. The authors contend that reform has undermined state capacity in China, and that the state's fiscal revenues will continue to decline.
