Quality Assurance & Quality Control ...The term quality control refers to the sum of all procedures undertaken to ensure the identity and purity of a particular pharmaceutical. Such procedures may range from the performance of simple chemical experiments which determine the identity and screening for the presence of particular pharmaceutical substance (thin layer chromatograp

hy, infrared spectroscopy, etc.), to more complicated requirements of pharmacopoeial monographs.  Quality control is, no doubt, a vital function of the pharmaceutical industry. Drug manufacturing companies must test personnel, environments, techniques, equipment, processes, and materials thoroughly to ensure that their new drugs are predictable, consistent, effective, and, most importantly, safe for human use.
