Determination Of Optimum Height For Counter Flow Cooling Tower Ashraf Kotb Department of Mechanical Power Engineering, Ain Shams University, Cairo, EGYPT ABSTRACT A model for counter flow cooling tower is present with treatments to recover the simplifications in the literature. The Bosnjakovic formula, Determination of Optimum Height for Counter Flow Cooling Tower The model determines the cooling tower optimum height, evaporation rate and distribution of air and water temperatures, humidity, water flow and Lewis factor along the tower height. It is concluded that: the height is affected by the inlet air humidity; the heat transfer mode is dominated by evaporation, and Lewis factor ranges from 0.91 to 0.924. [PDF] Determination of Optimum Height for Counter Flow ... A model for counter flow cooling tower is present with treatments to recover the simplifications in the literature. The Bosnjakovic formula, mutative water and air properties are used to relax the constraints. The finite volumes of water and moist (PDF) Determination of Optimum Height for Counter Flow ... Influence of chimney height is studied on above mentioned parameters. The draught produced at the base of the chimney largely depends on the height of the chimney and subsequently is directly proportional to the power produced by the turbine; therefore the optimum height of chimney is first determined for present area of the collector. Determination of Optimum Height of Small Prototype Model ... A method to determine optimum heap leach height has resulted from design work for a uranium heap leach project on the Macusani Plateau in south-eastern Peru. The on-off/racetrack heap leach process, the base case design parameters and the relevant column leach test results are described.
