Pedro el Grande, czar de Moscovia UNAM

It's something we all dread; the knock at the door from a Traffic Cop. We instantly fear the worst and for more than 3,000 families every year in Britain that fear sadly becomes a reality. The Police officer has come to deliver the news that their loved one has died in a road incident. But what happens after they have been told? Does the Police officer simply walk away? Is the family left to fend for itself? Thankfully not. A small group of specially trained Police Family Liaison Officers (FLOs) do what most of us could never do. They guide the bereaved family through the entire process, from delivering the trauma message in the first place, to helping them through the ordeal of identifying their loved one at the mortuary, right through to the inquest or court case in 12 months time and everything in between. PC Steve Woodward describes the journey the families embark upon as the biggest roller coaster ride of their lives with more highs and lows than you could ever possibly imagine.

Motores alternativos de combustion interna ha sido concebido para proporcionar al lector una vision general de las diferentes partes y subsistemas de los motores alternativos de combustion interna, tanto de aplicacion a plantas de traccion motriz para vehiculos como a plantas estacionarias para generacion de energia electrica. Su objetivo basico es cubrir las necesidades bibliograficas para el seguimiento de las asignaturas Ingenieria y Maquinas Termicas y Ampliacion de Motores Termicos, que se imparten en las escuelas de ingenieria industrial. Asimismo, pretende ofrecer una vision horizontal de las diferentes partes y subsistemas que conforman la maquina alternativa de combustion interna. Los tres primeros capitulos introducen al lector en la problematica de la transformacion de energia desde

una fuente primaria hasta su forma final en trabajo mecánico en un eje de rotación. En los capítulos siguientes, se analizan los aspectos concretos de la máquina alternativa que nos ocupa, que, dado su funcionamiento pulsante, se estructuran en una fase cerrada, en la que el volumen del cilindro está cerrado al exterior y se desarrollan los procesos para la generación de trabajo (compresión, aportación de calor y expansión), y una fase abierta, en la que el volumen del cilindro está abierto al exterior para realizar los procesos de renovación de la carga; ambas fases se dan tanto en los motores de encendido por compresión (MEC) como en los de encendido por chispa (MEP). Los capítulos finales ofrecen una visión mecánica del mecanismo transformador utilizado en los que se describe su arquitectura mecánica y el detalle de su funcionamiento.
