Beginner's Guide to Creating Portraits Sterling Publishing Company, Inc.

Because nature is so expansive and complex, so varied in its range of light, landscape painters often have to look further and more deeply to find form and structure, value patterns, and an organized arrangement of shapes. In *Landscape Painting*, Mitchell Albala shares his concepts and practices for translating nature's grandeur, complexity, and color dynamics into convincing representations of space and light. Concise, practical, and inspirational, *Landscape Painting* focuses on the greatest challenges for the landscape artist, such as:

- **Simplification and Massing:** Learn to reduce nature's complexity by looking beneath the surface of a subject to discover the form's basic masses and shapes.
- **Color and Light:** Explore color theory as it specifically applies to the landscape, and learn the various strategies painters use to capture the illusion of natural light.
- **Selection and Composition:** Learn to select wisely from nature's vast panorama.

Albala shows you the essential cues to look for and how to find the most promising subject from a world of possibilities. The lessons in *Landscape Painting*—based on observation rather than imitation and applicable to both plein air and studio practice—are accompanied by painting examples, demonstrations, photographs, and diagrams. Illustrations draw from the work of more than 40 contemporary artists and such masters of landscape painting as John Constable, Sanford Gifford, and Claude Monet. Based on Albala's 25 years of experience and the proven methods taught at his successful plein air workshops, this in-depth guide to all aspects of landscape painting is a must-have for anyone getting started in the genre, as well as more experienced practitioners who want to hone their skills or learn new perspectives.

Unlike many other art books only give recipes for mixing colors or describe step-by-step painting techniques, *Color and Light* answers the questions that realist painters continually ask, such as: "What happens with sky colors at sunset?", "How do colors change with distance?", and "What makes a form look three-dimensional?" Author James Gurney draws on his experience as a plain-air painter and science illustrator to share a wealth of information about the realist painter's most fundamental tools: color and light. He bridges the gap between abstract theory and practical knowledge for traditional and digital artists of all levels of experience.

This volume, published in 1753, was Hogarth's grand treatise on beauty, design and taste and was intended to help educate the masses on how to perceive art. His most prominent idea is the line of beauty, which is an s-shaped line that can be seen?set inside a pyramid?on the title page. Hogarth's theory is that this line is what captures a viewer's attention and evokes a sense of grace and movement. Unfortunately for Hogarth, his book was largely lampooned by his contemporaries and critics, including Charles Churchill who satirized the work in his "An Epistle to William Hogarth."
