World Scientific Jacey Boggs helps you bring textured and novelty yarns to the next level in Spin Art. Inside you'll learn all the secrets behind her exciting new fusion of traditional spinning and envelope-pushing creativity. The yarn styles explored in this comprehensive spinning guide are as well made as they are inventive. Jacey walks you through each of her techniques, with a refreshing mixture of quirky, fanciful, and unexpected designs that are always skillfully constructed. Inside you'll discover: • How to create innovative, eye-catching single and plied yarn styles, including wraps, beehives, bumps, racing stripes, loops, bubblewrap, multiplied, and more. • Detailed technical instruction with step-by-step photos with finished yarn and swatch close-ups. • Jacey's bright personality and

motivational tips to inspire all spinning enthusiasts to unleash their creative spirit. Traditional spinners will love Jacey's adventurous spirit and attention to expert technique, while textured-yarn spinners will love Jacey's wild designs and solid construction. As a bonus, the instructional DVD provides additional handspinning demonstration and commentary to complement the techniques in the book. Jacey has bottled the energy and expertise of her highly sought after workshops into a personal, at-home workshop experience for you.

How Cricket Really Works Springer

Here's a songbook, a storybook, a poetry collection, and much more, all rolled into one. Find a partner for hand claps such as Eenie, Meenie, Sassafreeny, or form a circle for games like Little Sally Walker. Gather as a family to sing well-loved songs like Amazing Grace and Oh, Freedom, or to read aloud the poetry of such African American luminaries as Langston Hughes, James Weldon Johnson, and Paul Laurence Dunbar. And snuggle down to enjoy classic stories retold by the author, including Aesop's fables and tales featuring Br'er

Rabbit and Anansi the spider.

(With CD-ROM)

Routledge

The study is presented in terms of the following major problem areas: interpretation of results of spin-model research, analytical spin studies, techniques involved in obtaining measurements of various parameters in the spin, effectiveness of controls during spin and recoveries, influence of long noses, strakes, and canards on spin and recovery characteristics, and correlation of spin and recovery characteristics for recent airplane and model designs.

Spin 96 - Proceedings Of The 12th International Symposium On High-energy Spin Physics

Penguin

Here is a discussion of the state of the art of spin resonance in low dimensional structures, such as two-dimensional electron systems, quantum wires, and quantum dots. Leading scientists report on recent advances and discuss open issues and perspectives.

Best friends Paul and Judy used to do naughty things to their pet, Beastie, but now they all have fun playing together.

Status of Spin Research for Recent Airplane Designs

Routledge
An interactive book for babies, that gently introduces them to the idea of nighttime. Turn the pages and spin the wheel to discover what happens when the sun goes down. Watch the garbage truck as it drives past your window, listen to the loud "hoot-hoots" of the owls, and smell the fresh bread that is being made at the bakery down the road. With beautiful and colorful illustrations, little ones will love learning about nighttime, and the people and animals that stay up to experience it. This board book has sturdy pages for little ones to turn, and an interactive picture wheel for their tiny hands to spin. Where is the owl? Can you turn the wheel and see if you can spot him? This interactive element promotes the development of fine motor skills in toddlers and reinforces their understanding of what they are learning. The simple yet charming text is fun to read aloud and share with toddlers, and the colorful illustrations help introduce them to the difference between night and day. Turn and Learn: Moon and Stars is ideal for adults and children to share together, whether that be at bedtime or preschool. So are you ready to turn and learn?
Love the Beastie

Springer Nature Presents a series of animals, in a text which contains a pop-up illustration, pull-tabs, and a spinning wheel on each page which can be turned to change the initial image of each animal into that of a different animal.

Electron Spin Resonance of Paramagnetic Crystals Springer Science & Business Media From soft, bulky single yarns to serviceable three-ply for heavy use, this guide to handspun yarns combines the positive traits of commercial yarns with personal touches. Focusing at first on the spinning wheel, emphasis is placed on the importance of adjusting and customizing the wheel for best results. Instructions on core spinning and less traditional techniques lead off the beaten path to novelty yarns. Each type of yarn is explored in detail with instructions on how to make them.

Spin and Spot: The Moon and Stars World Scientific Nuclear spins are highly coherent quantum objects that were featured in early ideas and demonstrations of quantum information processing. In silicon, the high-fidelity coherent control of a single phosphorus (31-P) nuclear spin I=1/2 has demonstrated

record-breaking coherence times, entanglement, and weak measurements. In this thesis, we demonstrate the coherent quantum control of a single antimony (123-Sb) donor atom, whose higher nuclear spin I = 7/2 corresponds to eight nuclear spin states. However, rather than conventional nuclear magnetic resonance (NMR), we employ nuclear electric resonance (NER) to drive nuclear spin transitions using localized electric fields produced within a silicon nanoelectronic device. This method exploits an idea first proposed in 1961 but never realized experimentally with a single nucleus, nor in a non-polar crystal such as silicon. We then present a realistic proposal to construct a chaotic driven top from the nuclear spin of 123-Sb. Signatures of chaos are expected to arise for experimentally realizable parameters of the system, allowing the study of the relation between quantum decoherence and classical chaos, and the observation of dynamical tunneling. These results show that high-spin quadrupolar nuclei could be deployed as chaotic models, strain sensors, hybrid spin-mechanical quantum systems, and

quantum-computing elements using all-electrical controls. Symmetry And Spin In Standard Model - Proceedings Of The Seventh Lake Louise Winter Institute Springer Nature Symmetries play a fundamental role in physics. Non-Abelian gauge symmetries are the symmetries behind theories for massless spin-1 particles, while the reparametrization symmetry is behind Einstein's gravity theory for massless spin-2 particles. In supersymmetric theories these particles can be connected also to massless fermionic particles. Does Nature stop at spin-2 or can there also be massless higher spin theories. In the past strong indications have been given that such theories do not exist. However, in recent times ways to evade those constraints have been found and higher spin gauge theories have been constructed. With the advent of the AdS/CFT duality correspondence even stronger indications have been given that higher spin gauge theories play an important role in fundamental physics. All these issues were discussed at a recent

international workshop in Singapore where the leading scientists in the field participated. This volume presents an up-to-date, detailed overview of the theories including its historic background, as well as the latest accomplishments in understanding the foundational properties of higher spin physics.
SPIN Regnery Pub
The authors of this contribution to the literature of resonance spectroscopy in paramagnetic systems are primarily concerned with the properties of the rare earth ions and, as such, the formal derivation of crystal field theory is set out in a manner which reflects this dominant interest. The ions of the 3d transition group are perhaps given too cursory a treatment in Chapter Two for those students of RF spectroscopy who have a somewhat less rare-earth oriented interest in the subject. Since the exam ples cited in the text do include some 3d transition ions, it is perhaps worthwhile in a preface of this sort to extend the broad theoretical concepts and group characterization of Chapter Two to cover, in a somewhat more detailed manner, the derivation of the spin-Hamiltonian for this case.

In Chapter Two, mention is made of the fact that for the 4f rare earth ions the spin orbit coupling energy is in general large compared to the crystal field influence of the surrounding ligand matrix. In such a case, the quantum number J is a good quantum number for the rare earth ion in question and the crystal field effects are taken into account within 1M, states. In this formulation, which is pursued in detail in this book, the effects of spin-orbit coupling have been taken care of at the very outset by the d~"ining of the 1M, states. Electron Spin Resonance and Related Phenomena in Low-Dimensional Structures DK Children VENKAT SUNDARAM was a key member of the Indian cricket team between 1970–80. During his illustrious career, he has worn numerous hats – he has been its manager for the 1998 tour to Sri Lanka; Chairman for BCCI's Ground and Wickets Committee for two terms; Chairman Ranji Trophy and U-22 selection committee for UPCA. He has also been a selector, coach, umpire, cricket commentator, sports anchor, author, and director/ producer. He is the force behind this special edition celebrating

Bishan Singh Bedi's life and times. SACHIN BAJAJ is a sports administrator and business professional. He has over two decades of experience with sports bodies like Kings XI Punjab, Cricket Club of India, England & Wales Cricket Board. He is also the proprietor of Global Cricket School and Co-founder of Niche Sports. Sachin has published eleven books and co-authored another three.

SPIN® - Selling World Scientific This comprehensive volume covers the most recent advances in the field of spin physics, including the latest research in high energy and nuclear physics and the study of nuclear spin structure. The comprehensive coverage also includes polarized proton and electron acceleration and storage as well as polarized ion sources and targets. Many significant new results and achievements on the different topics considered at the symposium are presented in this book for the first time. Contents: Present Understanding of the Nucleon Spin Structure (A Metz)Understanding Transversity: Present and Future (V Barone)Results and Future Prospects for Muon (g - 2) (B L Roberts)First Results from RHIC Spin

Program and Future Prospects (N Saito)Speculations in Hadron Spectroscopy (J M Richard)Nucleon Form Factors (K de Jager)Experimental Status of the GDH Sum Rule (H Arends)Polarized Structure Functions with Neutrino Beams (S Forte)Higher Twists Resummation in Inclusive and Semi-Inclusive Spin-Dependent DIS (O V Teryaev)A New Angular Momentum Sum Rule (E Leader)Single Spin Asymmetry Measurements for π0 Inclusive Productions in $p + p\uparrow \rightarrow \pi 0 + X$ and $\pi- + p\uparrow \rightarrow \pi 0+ X$ Reactions at 70 and 40 GeV Respectively (S B Nurushev)Polarisation in the eRHIC Electron (Positron) Ring (D P Barber)Polarisation Build Up in COMPASS 6LiD Target (J Koivuniemi)and other papers (a total of 170 contributions) Readership: Researchers and graduate students in spin physics, including experimental, theoretical and accelerator physics. Keywords:Spin ;Fundamental Symmetries;QCD;Nuclear Physics;Hadronic Physics;Polarized Targerts;Polarized Beams;PolarimetryKey Features: *High Energy Spin Physics* Oxford University Press on Demand This volume presents lecture notes of the 12th International School of

Theoretical Physics held in 2016 in Rzeszów, Poland. The lectures serve as an introduction for young physicists starting their career in condensed matter theoretical physics. The book provides a comprehensive overview of modern ideas and advances in theories and experiments of new materials, quantum nanostructures as well as new mathematical methods.This lecture note is an essential source of reference for physicists and materials scientists. It is also a suitable reading for graduate students. *How to Turn the Power of the Press to Your Advantage* Little Simon Spintronics Handbook, Second Edition offers an update on the single most comprehensive survey of the two intertwined fields of spintronics and magnetism, covering the diverse array of materials and structures, including silicon, organic semiconductors, carbon nanotubes, graphene, and engineered nanostructures. It focuses on seminal pioneering work, together with the latest in cutting-edge advances, notably extended discussion of two-dimensional materials beyond graphene, topological

insulators, skyrmions, and molecular spintronics. The main sections cover physical phenomena, spin-dependent tunneling, control of spin and magnetism in semiconductors, and spin-based applications. Features: Presents the most comprehensive reference text for the overlapping fields of spintronics (spin transport) and magnetism. Covers the full spectrum of materials and structures, from silicon and organic semiconductors to carbon nanotubes, graphene, and engineered nanostructures. Extends coverage of two-dimensional materials beyond graphene, including molybdenum disulfide and study of their spin relaxation mechanisms Includes new dedicated chapters on cutting-edge topics such as spin-orbit torques, topological insulators, half metals, complex oxide materials and skyrmions. Discusses important emerging areas of spintronics with superconductors, spin-wave spintronics, benchmarking of spintronics devices, and theory and experimental approaches to molecular spintronics. Evgeny Tsymbal's research is focused on computational materials science aiming at the understanding of fundamental

properties of advanced ferromagnetic and ferroelectric nanostructures and materials relevant to nanoelectronics and spintronics. He is a George Holmes University Distinguished Professor at the Department of Physics and Astronomy of the University of Nebraska-Lincoln (UNL), Director of the UNL's Materials Research Science and Engineering Center (MRSEC), and Director of the multi-institutional Center for NanoFerroic Devices (CNFD). Igor Žutić received his Ph.D. in theoretical physics at the University of Minnesota. His work spans a range of topics from high-temperature superconductors and ferromagnetism that can get stronger as the temperature is increased, to prediction of various spin-based devices. He is a recipient of 2006 National Science Foundation CAREER Award, 2005 National Research Council/American Society for Engineering Education Postdoctoral Research Award, and the National Research Council Fellowship (2003-2005). His research is supported by the National Science Foundation, the Office of Naval Research, the Department of Energy, and the Airforce Office of Scientific

Research. **Volume 1: Conference Report** Workman Publishing The authors describe how an individual or organization suddenly found in the public spotlight can use the media--which is driven entirely by human motives--as an ally in presenting an intelligent image **Spin Orbitronics And Topological Properties Of Nanostructures - Lecture Notes Of The Twelfth International School On Theoretical Physics** Storey Publishing Expert Beth Smith teaches you everything you need to know to spin your own yarn, from choosing a spinning wheel to every stage of preparing your fiber, plying, winding off, and finishing. In selling high-value products or services: 'closing' increases your chance of success; it is essential to describe the benefits of your product or service to the customer; objection handling is an important skill; open questions are more effective than closed questions. All false, says this provocative book. Neil Rackham and his team studied more than 35,000 sales calls made by 10,000 sales people in 23 countries over 12 years. Their findings revealed that many of the methods developed for selling low-value goods just don‘t work for major sales. Rackham went on to introduce his SPIN-Selling method. SPIN describes the whole selling process: Situation questions Problem questions Implication questions Need-payoff questions SPIN-Selling provides you with a set of simple and practical techniques which have been tried in many of today‘s leading companies with dramatic improvements to their sales performance. *A Spin-and-Play Book* Roli Books Private Limited Celebrate Chanukah and play the dreidel game! Spin the dreidel and see where it lands. Nun, gimel, hey, and shin -- who will win? Give it a spin!
