New Directions for Sustainable Urban Living Routledge

With Asia's cities undergoing unprecedented growth in the 21st century, lauded the 'urban century' by many, Sustainable Cities in Asia provides a timely examination of the challenges facing cities across the continent including some of the projects, approaches and solutions that are currently being tested. This book uses numerous case studies, analysing topical issues ranging from city cycling in India, to green spaces in China, to the use of community-led energy generation projects in post-Fukushima Japan. Containing contributions from an international team of scholars, it also takes a multi-disciplinary approach and draws on examples from a wide range of countries, including China, India, Japan, Korea, Taiwan, Singapore and the United Arab Emirates. Ultimately, by providing a comprehensive discussion of the broader debates around the shape of sustainable urbanism, it demonstrates that Asia is one of the most active regions in terms of the development of sustainable city strategies. Tackling the contemporary issues of key importance for sustainability, such as property markets, migration and transport, this book will appeal to students and scholars of Urban

Geography, Sustainability, Environmental Studies and Asian studies.

Bringing the major current insights in implementation research and theory together, Public Policy, Implementation and Governance reviews the literature on public policy implementation, relating it to contemporary developments in thinking about governance. The text stresses the continuing importance of a focus upon implementation processes and explores its central relevance to the practice of public administration. In light of the changing nature of governance, Hill and Hupe suggest strategies for both future research on and management of public policy implementation. Their basic approach is two-fold: firstly, to understand the process of implementation and secondly, to address how one might control and affect this process. Re-exploring the state of the art of the study of implementation as a sub-discipline of political science and public administration, this book will be essential reading for students and researchers in public policy, social policy, public management, public administration and governance. This is an excellent and much needed book. Hill and Hupe have provided a well written and highly accessible account of the development of implementation studies which will be immensely valuable to everyone concerned with understanding implementation in modern policy making.' - Professor Wayne Parsons, University of London

Planning the Built Environment takes a systematic, technical approach to describing how urban infrastructures work. Accompanied by detailed diagrams, illustrations, tables, and reference lists, the book begins with landforms and progresses to essential utilities that manage drainage, wastewater, power, and water supply. A section on streets, highways, and transit systems is highly detailed and practical. Once firmly grounded in these "macro" systems, Planning the Built Environment examines the physical environments of cities and suburbs, including a discussion of critical elements such as street and subdivision planning, density, and siting of community facilities. Each chapter includes essential definitions, illustrations and diagrams, and an annotated list of references. This timely book explains new physical planning methods and current thinking on cluster development, new urbanism, and innovative transit planning and development. Planners, architects, engineers, and anyone who designs or manages the physical components of urban areas will find this book both an authoritative reference and an exhaustive, understandable technical manual of facts and best practices. Instructors in planning and allied fields will appreciate the practical exercises that conclude each chapter: valuable learning tools for students and professionals alike.

In the latter part of the C20th, a series of seminal books were written which examined Los Angeles by the likes of Reyner Banham, Mike Davis, Edward Soja, Allen Scott, Michael Dear, Frederick Jameson, Umberto Eco, Bernard-Henri Levy, and Jean Baudrillard which have been hugely influential in thinking about cities more broadly. The debates which were generated by these works have tended to be very heated and either defensive or offensive in approach. A sufficient amount of time has since passed that a more measured approach to evaluating this work can now be taken. The first section of this book, 'Contra This and Contra That', provides such a critique of the various theories applied to Los Angeles during the last century, balancing the positive with the negative. The second part of the book is an investigation of L.A. as it exists on the ground today. While political, the theoretical stance taken in this investigation is not mounted as a platform from which to advocate a particular ideology. Instead, it encompasses cultural as well as economic issues to put forth a view of L.A. which is coherent and cogent while at the same time considering its multi-layered, complex and ever-changing qualities. It concludes by arguing that sectorised off and 'totalizing' visions of the city will not do as instruments of urban analysis and that only a theory as mobile as its target will do: one that replicates the polymer nature of this place. It proposes that, extending that

theory to the world beyond this particular city, only a theory that models itself on the mobile and polymer nature of the world, while still retaining a sense of the actual and the real, will do as an instrument with which to comprehend the world. In doing so, this book is not only a model by which to think through Los Angeles, but as a model by which to think through other world cities.

"This book is on the suggested reading list for planners preparing to take the AICP exam. As veteran planner the author points out, the most troublesome conflicts for planners aren't between good and bad, they're between competing good, neither of which can be fully achieved. The 54 real-world scenarios described here typify the tough moral dilemmas that confront today's practitioners. The author offers planners a way to recognize the ethical conflicts that arise in everyday practice, analyze them using "practical moral reasoning," apply relevant sections of the AICP Code of Ethics and the APA/AICP Ethical Principles in Planning (both of which are included in full), and decide on the best course of action. The author tells a series of stories—each one a sticky situation that could confront a typical planner. Barrett points out the ethical issues, identifies possible alternatives, and cites relevant sections of the AICP Code. Finally, the author discusses the pros and cons of each alternative. Five particularly complex scenarios are especially intended for group discussion. Individuals studying for the AICP exam will find this book indispensable. But it also should be required reading for every planner who struggles to act ethically and for planning student who wants to understand how professionals define and serve the public interest. Planning agencies, private consulting firms, and planning commissions can use its realistic scenarios to jump start group discussions and workshops on ethical planning."
