The book discusses traditional processes to create products like nitric acid, sulphuric acid, ammonia,

and methanol, as well as more novel products like bioethanol and biodiesel. Industrial Chemical Process Analysis and Design - 1st Edition The chemical processes are for production and quality control of manufactured products, and process analytical technology is used to determine the physical and chemical composition of the desired products during a manufacturing process. It is first mentioned in the chemical literature in 1946(1,2).
