To perform my late promise to you, I shall without further ceremony acquaint you, that in the beginning of the Year 1666 (at which time I applied my self to the grinding of Optick glasses of other figures than Spherical,) I procured me a Triangular glass-Prisme, to try therewith the celebrated Phænomena of Colours. And in order thereto having darkened my chamber, and made a small hole in my window-shuts, to let in a convenient quantity of the Suns light, I placed my Prisme at his entrance, that it might be thereby refracted to the opposite wall. It was at first a very pleasing divertisement, to view the vivid and intense colours produced thereby; but after a while applying my self to consider them more circumspectly, I became surprised to see them in an oblong form; which, according to the received laws of Refraction, I expected should have been circular. They were terminated at the sides with streight lines, but at the ends, the decay of light was so gradual, that it was difficult to determine justly, what was their figure; yet they seemed semicircular. Comparing the length of this coloured Spectrum with its breadth, I found it about five times greater; a disproportion so extravagant, that it excited me to a more then ordinary curiosity of examining, from whence it might proceed. I could scarce think, that the various Thickness of the glass, or the termination with shadow or darkness, could have any Influence on light to produce such an effect; yet I thought it not amiss, first to examine those circumstances, and so tryed, what would happen by transmitting light through parts of the glass of divers thicknesses, or through holes in the window of divers bignesses, or by setting the Prisme without so, that the light might pass through it, and be refracted before it was terminated by the hole: But I found none of those circumstances material. The fashion of the colours was in all these cases the same.

Inspired by Richard Feynman and J.J. Sakurai, A Modern Approach to Quantum Mechanics allows lecturers to expose their undergraduates to Feynman's approach to quantum mechanics while simultaneously giving them a textbook that is well-ordered, logical and pedagogically sound. This book covers all the topics that are typically presented in a standard upper-level course in quantum mechanics, but its teaching approach is new. Rather than organizing his book according to the

historical development of the field and jumping into a mathematical discussion of wave mechanics, Townsend begins his book with the quantum mechanics of spin. Thus, the first five chapters of the book succeed in laying out the fundamentals of quantum mechanics with little or no wave mechanics, so the physics is not obscured by mathematics. Starting with spin systems it gives students straightforward examples of the structure of quantum mechanics. When wave mechanics is introduced later, students should perceive it correctly as only one aspect of quantum mechanics and not the core of the subject.

Fans of Chris Ferrie's ABCs of Space, ABCs of Physics, and General Relativity for Babies will love this introduction to science for babies and toddlers! It only takes a small spark to ignite a child's mind. This alphabetical installment of the Baby University baby board book series is the perfect introduction to science for infants and toddlers. It makes a wonderful science baby gift for even the youngest scientist. Give the gift of learning to your little one at birthdays, baby showers, holidays, and beyond! A is for Amoeba B is for Bond C is for Conductor From amoeba to zygote, ABCs of Science is a colorfully simple introduction for babies—and grownups—to a new science concept for every letter of the alphabet. Written by an expert, each page in this baby and toddler science book features multiple levels of text so the book grows along with your little scientist. If you're looking for the perfect STEAM book for teachers or science toys for babies, look no further! ABCs of Science offers fun early learning for your little scientist!

Case Study Research in Practice explores the theory and practice of case study research. Helen Simons draws on her extensive experience of teaching and conducting case study to provide a comprehensive and practical account of how to design, conduct and communicate case study research. It addresses questions often raised by students and common misconceptions about case research. In four sections the book covers - Rationale, concept and design of case study research - Methods, ethics and reflexivity in case study - Interpreting, analyzing and reporting the case - Generalizing and theorizing in case study research Rich with 'tales from the field' and summary memos as an aide-memoire to future action, the book provides fresh insights and challenges for researchers to guide their practice of case study research. This is an ideal text for those studying and conducting case study research in education, health and social care, and related social science disciplines. Helen Simons is Professor Emeritus of Education University of Southampton

Finally, a scientific series that treats babies like the geniuses they are! With scientific and mathematical information from an expert, this is the perfect book for the next Einstein. Written by an expert, Quantum Entanglement for Babies is a colorfully simple introduction to one of nature's weirdest phenomenons. Babies (and grownups!) will learn about the wild world of quantum particles. With a tongue-in-cheek approach that adults will love, this installment of the Baby University board book series is the perfect way to introduce basic concepts to even the youngest scientists. After all, it's never too early to become a quantum physicist! Baby University: It only takes a small spark to ignite a child's mind.

**Care, Socialization and Play in Ancient Attica** Sourcebooks, Inc.

Care, Socialization and Play in Ancient Attica scrutinizes in how infants and young children were nursed, cared for and socialized in the oikos (family unit). In what ways were mothers and fathers emotionally engaged in their offspring or were they merely indifferent? What were the developmental consequences of growing up in multiple relationships? How were young children engaged in various types of play in everyday life and what toys were made for and handled by infants and young children? The developmental significance of toys and play is highlighted, as well as their cultural and sacral functions in ancient Athenian society. This book reconstructs the social

and behavioural world of infants and young children in ancient Greece based on a rich collection of archaeological finds from the classical period. It presents a selection of never-before-seen child artifacts which uncover groundbreaking evidence supporting new ideas on child development.-- Publisher description.

This book contains 18 reviewed papers originally presented at the conference Practical Work in Science Education - the Face of Science in Schools, held at the Royal Danish School of Educational Studies in Copenhagen, in May 1998. Substantial literature about practical work has been published during the last decade. This book contains contributions by researchers from England, France, Germany, Norway, Israel, Italy, Sweden and South Africa and adds important aspects to a varied and balanced view of practical work. Some of the papers are conceptual, addressing aims and rationales for practical work from a theoretical and critical perspective. Most papers, however, encounter recent empirical research. Important aspects about the outcome of students' practice of science both inside and outside the conventional laboratory are addressed and make a substantial contribution to our understanding of the effectiveness of practical work for conceptual learning and the attainment of skills and processes normally associated with science.

Since the Kierkegaard Studies Monograph Series (KSMS) was first published in 1997, it has served as the authoritative book series in the field. Starting from 2011 the Kierkegaard Studies Monograph Series will intensify the peer-review process with a new editorial and advisory board. KSMS is published on behalf of the S ren Kierkegaard Research Centre at the University of Copenhagen. KSMS publishes outstanding monographs in all fields of Kierkegaard research. This includes Ph.D. dissertations, Habilitation theses, conference proceedings and single author works by senior scholars. The goal of KSMS is to advance Kierkegaard studies by encouraging top-level scholarship in the field. The editorial and advisory boards are deeply committed to creating a genuinely international forum for publication which integrates the many different traditions of Kierkegaard studies and brings them into a constructive and fruitful dialogue. To this end the series publishes monographs in English and German. Potential authors should consult the Submission guidelines. All submissions will be blindly refereed by established scholars in the field. Only high-quality manuscripts will be accepted for publication. Potential authors should be prepared to make changes to their texts based on the comments received by the referees.

In this collection of seven major essays (one of them published here for the first time), Monica Green argues that a history of women's healthcare in medieval western Europe has not yet been written because it cannot yet be written - the vast majority of texts relating to women's healthcare have never been edited or studied. Using the insights of women's history and gender studies, Green shows how historians need to peel off the layers of unfounded assumption and stereotype that have characterized the little work that has been done on medieval women's healthcare. Seen in their original contexts, medieval gynecological texts raise questions of women's activity as healthcare providers and recipients, as well as questions of how the sexual division of labor, literacy, and professionalization functioned in the production and use of medical knowledge on the female body. An appendix lists all known medieval gynecological texts in Latin and the western European vernacular languages.

Qualitative methods are used to an increasing extent in market research, evaluation, consultancy, education, and social research. Students in many disciplines use qualitative methods in their reports and dissertations. However, qualitative research does not always demonstrate a chain of evidence which links conclusions with data. Consultants' reports are often based more on impressions than on presented data. Students spend a long time in preparation of qualitative research, and their analyses are often weak. This book provides practical advice on how to display qualitative data. It also explains why a display of qualitative data is important in a larger methodological context.

*Matter and Interactions*, 4th Edition offers a modern curriculum for introductory physics (calculus-based). It presents physics the way practicing physicists view their discipline while integrating 20th Century physics and computational physics. The text emphasizes the small number of fundamental principles that underlie the behavior of matter, and models that can explain and predict a wide variety of physical phenomena. *Matter and Interactions*, 4th Edition will be available as a single volume hardcover text and also two paperback volumes.
