"Code of Massachusetts regulations,
 2000" F.A. Davis

this concise book covers all aspects of
 neonatal resuscitation from the moment
 of birth to transfer to the neonatal unit.
 It discusses special considerations, and
 communication with parents and other
 professionals. The advice has been
 drawn up by a working party, giving it
 the authority of a distinguished body of
 specialists.

Strategies to Improve Cardiac Arrest
 Survival Springer Science & Business
 Media

The Difficult Airway provides a
 comprehensive textual and visual
 coverage of how to deal with patients
 who have expected or unexpected
 difficult airways. The text begins with a
 description of the incidence and
 importance of the difficult airway and
 then describes the ASA Difficult Airway
 Algorithm created to facilitate the
 management of "difficult airways." The
 majority of the book features a
 comprehensive step-by-step approach to
 the rescue techniques listed as part of
 the ASA Algorithm. Noted experts in
 each of the techniques have been
 recruited by the book editors to present
 the information. Figures throughout the
 book illustrate important points and
 procedures. This is a wonderful resource
 for professionals in the health care field
 including anesthesiologists, intensive
 care physicians, emergency room
 physicians, nurses, and out-of-hospital
 first responders.

Practice Guidelines Oxford University
 Press

Addresses the challenges of managing

critically ill obstetric patients, with
 chapters authored by
 intensivists/anesthesiologists and
 obstetricians/maternal-fetal medicine
 specialists.

Now in paperback, the second edition of
 the Oxford Textbook of Critical Care is a
 comprehensive multi-disciplinary text
 covering all aspects of adult intensive
 care management. Uniquely this text
 takes a problem-orientated approach
 providing a key resource for daily clinical
 issues in the intensive care unit. The text
 is organized into short topics allowing
 readers to rapidly access authoritative
 information on specific clinical problems.
 Each topic refers to basic physiological
 principles and provides up-to-date
 treatment advice supported by
 references to the most vital literature.
 Where international differences exist in
 clinical practice, authors cover
 alternative views. Key messages
 summarise each topic in order to aid
 quick review and decision making.
 Edited and written by an international
 group of recognized experts from many
 disciplines, the second edition of the
 Oxford Textbook of Critical Care provides
 an up-to-date reference that is relevant
 for intensive care units and emergency
 departments globally. This volume is the
 definitive text for all health care
 providers, including physicians, nurses,
 respiratory therapists, and other allied
 health professionals who take care of
 critically ill patients.

"Code of Massachusetts regulations, 2007" Springer Science & Business Media
 Practical Resuscitation for Healthcare Professionals is a beginner's guide to practical resuscitation which enables students and newly qualified staff to develop key resuscitation knowledge and skills. It reflects current guidelines and developments in resuscitation, including the 2005 European Resuscitation Council Guidelines for Resuscitation. Practical Resuscitation for Healthcare Professionals covers adult, paediatric and trauma resuscitation and addresses current legal and ethical issues including family witnessed resuscitation. Revised in accordance with the '2005 European Resuscitation Council Guidelines for Resuscitation' Covers

prevention and management of cardiac arrest and post-resuscitation care
 Includes evidence based guidelines for basic and advanced life support
 Addresses family witnessed resuscitation
 Examines early warning scores
 Enables staff to develop key clinical competences in resuscitation
 Explores legal and ethical issues
 Examines adult, paediatric and trauma resuscitation
 Includes case studies
 From reviews of the first edition: 'a comprehensive book, which reflects current guidelines. It is set out in a logical format with relevant supporting diagrams and illustrations. There are clear learning outcomes for each chapter... a good introduction to resuscitation for nurses.' British Journal of Resuscitation

Management of Acute Pulmonary Embolism John Wiley & Sons
 This practical volume highlights traditional, novel, and evolving aspects of the diagnosis and treatment of pulmonary embolism (PE). The contributors comprise an international team of experts. Important aspects of diagnosis, risk stratification, and differential treatment of patients with PE are presented in a concise, yet comprehensive manner. Emphasis is placed on specific issues related to PE, including pregnancy, cancer, thrombophilia, and air travel.

"Code of Massachusetts regulations, 2008"

Cardiac arrest often strikes seemingly healthy individuals without warning and without regard to age, gender, race, or health status. Representing the third leading cause of death in the United States, cardiac arrest is defined as "a severe malfunction or cessation of the electrical and mechanical activity of the heart ... [which] results in almost instantaneous loss of consciousness and collapse". Although the exact number of

cardiac arrests is unknown, conservative estimates suggest that approximately 600,000 individuals experience a cardiac arrest in the United States each year. In June 2015, the Institute of Medicine (IOM) released its consensus report *Strategies to Improve Cardiac Arrest Survival: A Time to Act*, which evaluated the factors affecting resuscitation research and outcomes in the United States. Following the release of this report, the National Academies of Sciences, Engineering, and Medicine was asked to hold a workshop to explore the barriers and opportunities for advancing the IOM recommendations. This publication summarizes the presentations and discussions from the workshop.

Safe Passage

Most patients with critical cardiac or thoracic conditions will at some stage pass through the cardiothoracic critical care unit. Critical care presents more complex clinical data than any other area of medicine. The new edition of *Core Topics in Cardiothoracic Critical Care* focuses on the latest practise in the management of patients in cardiothoracic intensive care. The practice of cardiothoracic critical care medicine is constantly evolving, and this new edition reflects the modernized learning styles for trainees. Each chapter includes key learning points as well as sample multiple choice questions and answers to assist in exam preparation. This edition also features updated chapters on ECMO, perioperative management of patients undergoing emergency cardiothoracic surgery, and advanced modes of organ support for patients. This text provides key knowledge in a concise and accessible manner for trainees, clinicians and consultants from specialities and

disciplines such as cardiology and anaesthesia, and nursing and physiotherapy.
