In *Teaching with Poverty in Mind: What Being Poor Does to Kids' Brains and What Schools Can Do About It*, veteran educator and brain expert Eric Jensen takes an unflinching look at how poverty hurts children, families, and communities across the United States and demonstrates how schools can improve the academic achievement and life readiness of economically disadvantaged students. Jensen argues that although chronic exposure to poverty can result in detrimental changes to the brain, the brain's very ability to adapt from experience means that poor children can also experience emotional, social, and academic success. A brain that is susceptible to adverse environmental effects is equally susceptible to the positive effects of rich, balanced learning environments and caring relationships that build students' resilience, self-esteem, and character. Drawing from research, experience, and real school success stories, *Teaching with Poverty in Mind* reveals * What poverty is and how it affects students in school; * What drives change both at the macro level (within schools and districts) and at the micro level (inside a student's brain); * Effective strategies from those who have succeeded and ways to replicate those best practices at your own school; and * How to engage the resources necessary to make change happen. Too often, we talk about change while maintaining a culture of excuses. We can do better. Although no magic bullet can offset the grave challenges faced daily by disadvantaged children, this timely resource shines a spotlight on what matters most, providing an inspiring and practical guide for enriching the minds and lives of all your students.

Decades of research have demonstrated that the parent-child dyad and the environment of the family—which includes all primary caregivers—are at the foundation of children's well-being and healthy development. From birth, children are learning and rely on parents and the other caregivers in their lives to protect and care for them. The impact of parents may never be greater than during the earliest years of life, when a child's brain is rapidly developing and when nearly all of her or his experiences are created and shaped by parents and the family environment. Parents help children build and refine their knowledge and skills, charting a trajectory for their health and well-being during childhood and beyond. The experience of parenting also impacts parents themselves. For instance, parenting can enrich and give focus to parents' lives; generate stress or calm; and create any number of emotions, including feelings of happiness, sadness,

fulfillment, and anger. Parenting of young children today takes place in the context of significant ongoing developments. These include: a rapidly growing body of science on early childhood, increases in funding for programs and services for families, changing demographics of the U.S. population, and greater diversity of family structure. Additionally, parenting is increasingly being shaped by technology and increased access to information about parenting. Parenting Matters identifies parenting knowledge, attitudes, and practices associated with positive developmental outcomes in children ages 0-8; universal/preventive and targeted strategies used in a variety of settings that have been effective with parents of young children and that support the identified knowledge, attitudes, and practices; and barriers to and facilitators for parents' use of practices that lead to healthy child outcomes as well as their participation in effective programs and services. This report makes recommendations directed at an array of stakeholders, for promoting the wide-scale adoption of effective programs and services for parents and on areas that warrant further research to inform policy and practice. It is meant to serve as a roadmap for the future of parenting policy, research, and practice in the United States.

In this paper we analyze the economic impacts of the COVID-19 pandemic and the policies adopted to curtail the spread of the disease in Nigeria. We carry out simulations using a multiplier model based on the 2018 Social Accounting Matrix (SAM) for Nigeria, which includes supply-use tables for 284 goods and services. The pandemic's global reach and impact on the global economy combined with the response policies in Nigeria represent a large, sudden shock to the country's economy. The SAM multiplier model is well-suited for measuring the short-term direct and indirect results of this type of shock because the SAM represents both the structure of the economy and the interactions among economic actors via commodity and factor markets. Our analysis focuses on the five-week lockdown implemented by the federal government across the Federal Capital Territory of Abuja and Lagos and Ogun states from late March to early May 2020, the federal lockdown for Kano from mid-April, and the state-level lockdowns that were implemented from mid-April for around seven weeks in Akwa Ibom, Borno, Ekiti, Kwara, Osun, Rivers, and Taraba states. We estimate that during the lockdown periods Nigeria's GDP suffered a 34.1 percent loss due to COVID-19, amounting to USD 16 billion, with two-thirds of the losses coming from the services sector. The agriculture sector, which serves as the primary means of livelihood for most Nigerians, suffered a 13.1 percent loss in output (USD 1.2 billion). Although primary agricultural activities were excluded from the direct restrictions

on economic activities imposed in the lockdown zones, the broader agri-food system was affected indirectly because of its linkages with the rest of the economy. We estimate that households lost on average 33 percent of their incomes during the period, with the heaviest losses occurring for rural non-farm and for urban households. The economic impacts of COVID-19 include a 14-percentage point temporary increase in the poverty headcount rate for Nigeria, implying that 27 million additional people fell below the poverty line during lockdown. Lastly, we consider economic recovery scenarios as the COVID-19 policies are being relaxed during the latter part of 2020. Our findings have implications for understanding the direct and indirect impacts of COVID-19, for policy design during the recovery period, and for planning future disease prevention measures while protecting livelihoods and maintaining economic growth.

 Children are already learning at birth, and they develop and learn at a rapid pace in their early years. This provides a critical foundation for lifelong progress, and the adults who provide for the care and the education of young children bear a great responsibility for their health, development, and learning. Despite the fact that they share the same objective - to nurture young

children and secure their future success - the various practitioners who contribute to the care and the education of children from birth through age 8 are not acknowledged as a workforce unified by the common knowledge and competencies needed to do their jobs well. *Transforming the Workforce for Children Birth Through Age 8* explores the science of child development, particularly looking at implications for the professionals who work with children. This report examines the current capacities and practices of the workforce, the settings in which they work, the policies and infrastructure that set qualifications and provide professional learning, and the government agencies and other funders who support and oversee these systems. This book then makes recommendations to improve the quality of professional practice and the practice environment for care and education professionals. These detailed recommendations create a blueprint for action that builds on a unifying foundation of child development and early learning, shared knowledge and competencies for care and education professionals, and principles for effective professional learning. Young children thrive and learn best when they have secure, positive relationships with adults who are knowledgeable about how to support their development and learning and are responsive to their individual progress. *Transforming the Workforce for Children Birth Through Age 8* offers guidance on system changes to improve the quality of professional practice, specific actions to improve professional learning systems and workforce development, and research to continue to build the knowledge base in ways that will directly advance and inform future actions. The recommendations of this book provide an opportunity to improve the quality of the care and the education that children receive, and ultimately improve outcomes for children.

Does poverty lead to environmental degradation? Do degraded environments and natural resources lead to poverty? Or, are there other forces at play? Is the relationship between poverty and the environment really as straightforward as the vicious circle portrayal of 'poverty leading to environmental destruction leading to more poverty' would suggest? Does it matter if the relationship is portrayed in this way? This book suggests that it does matter. Arguing that such a portrayal is unhelpful and misleading, the book brings together a diverse range of analytical frameworks and approaches that can enable a much deeper investigation of the context and nature of poverty-environment relationships. Analytical frameworks and approaches examined in the book include political ecology, a gendered lens, Critical Institutionalism, the Environmental Entitlements framework, the Institutional Analysis and Development approach, the Sustainable Livelihoods Framework, wellbeing analysis, social network analysis and frameworks for the analysis of the governance of natural resources. Recommended further reading draws on published material from the last thirty years as well as key contemporary publications, giving readers a steer towards essential texts and authors within each subject area. Key themes running through the analytical frameworks and approaches are identified and examined, including power, access, institutions and scale.

A down-to-earth overview of the causes and effects of poverty and possible remedies." —Kirkus Reviews *Water. Food. Housing.* The most basic and crucial needs for survival, yet 40 percent of people in the United States don't have the resources to get them. With key policy changes, we could eradicate poverty in this country within our lifetime—but we need to get started now. Nearly 40 million people in the United States live below the poverty line—about \$26,200 for a family of four. Low-income families and individuals are everywhere, from cities to rural communities. While poverty is commonly seen as a personal failure, or a deficiency of character or knowledge, it's actually the result of bad policy. Public policy has purposefully erected barriers that deny access to basic needs, creating a society where people can easily become trapped—not because we lack the resources to lift them out, but because we are actively choosing not to. Poverty is close to inevitable for low-wage workers and their children, and a large percentage of these people, despite qualifying for it, do not receive government aid. From Joanne Samuel Goldblum and Colleen Shaddox, *Broke in America* offers an eye-opening and galvanizing look at life in poverty in this country: how circumstances and public policy conspire to keep people poor, and the concrete steps we can take to end poverty for good. In clear, accessible prose, Goldblum and Shaddox detail the ways the current system is broken and how it's failing so many of us. They also highlight outdated and ineffective policies that are causing or contributing to this unnecessary problem. Every chapter features action items readers can use to combat poverty—both nationwide and in our local communities, including the most effective public policies you can support and how to work hand-in-hand with representatives to affect change. So far, our attempted solutions have fallen short because they try to "fix" poor people rather than address the underlying problems. Fortunately, it's much easier to fix policy than people. Essential and timely, *Broke in America* offers a crucial road map for securing a brighter future.

Urban planning is deeply implicated in both the planetary crisis of climate change and the personal crises of unhealthy lifestyles. Worldwide health issues such as obesity, mental illness, growing health inequalities and climate vulnerability cannot be solved solely by medicines but also by tackling the social, economic and environmental determinants. In a time when unhealthy and unsustainable conditions are being built into the physical fabric of cities, a new awareness and strategy is urgently needed to putting health and well-being at the heart of planning. The *Routledge Handbook of Planning for Health and Well-being* authoritatively and comprehensively integrates health into planning, strengthening the hands of those who argue and plan for healthy environments. With contributions from international leaders in the field, the *Handbook of Planning for Health and Well-being* provides context, philosophy, research, processes, and tools of experienced practitioners through case studies from four continents.

Human health and well being are closely intertwined with the ability to access affordable and modern domestic energy services, including heating, cooling, lighting, cooking, and information technology. Energy poverty is said to occur when such amenities cannot be secured up to a socially- and physically- necessitated level. Millions of people across the world suffer from energy poverty due to a combination of financial, social and technical circumstances. *Energy Poverty and Vulnerability* provides novel and critical perspectives on the drivers and consequences of energy-related injustices in the home. Drawing together original research conducted by leading experts, the book offers fresh and innovative insights into the ways in which hitherto unexplored factors such as cultural norms, environmental conditions and household needs combine to shape vulnerability to energy poverty. Case studies from a wide range of countries are presented, thus providing the first globally-integrated account of a policy and research domain that has previously been divided between the Global South and North. An examination of the diverse manifestations of energy poverty is supplemented by an identification of this condition's shared and context-specific causes. Conveying policy-relevant insights that can inform decision-making, this book can be of great interest to students and scholars of energy demand, social justice, and sustainability transitions, as well as decision-makers and practitioners who wish to find out more about this complex issue.

This book reflects intersection between the lives, commitments, and strategies of two highly respected figures Dr. Paul Farmer and Fr. Gustavo Gutierrez joined in their option for the poor, their defense of life, and their commitment to liberation. Farmer has credited liberation theology as the inspiration for his effort to do "social justice medicine," while Gutierrez has recognized Farmer's work as particularly compelling example of the option for the poor, and the impact that theology can have outside the church. Draws on their respective writings, major addresses by both at Notre Dame, and a transcript of a dialogue between them. *A Framework for Understanding Poverty* Solution Tree Press
Schools across the United States and Canada are disrupting the adverse effects of poverty and supporting students in ways that enable them to succeed in school and in life. In this second edition, Parrett and Budge show you how your school can achieve similar results. Expanding on their original framework's still-critical concepts of actions and school culture, they incorporate new insights for addressing equity, trauma, and social-emotional learning. These fresh perspectives combine with lessons learned from 12 additional high-poverty, high-performing schools to form the updated and enhanced Framework for Collective Action. Emphasizing students' social, emotional, and academic learning as the hub for all action in high-performing, high-poverty schools, the authors describe how educators can work within the expanded Framework to address the needs of all students, but particularly those who live in poverty. Equipped with the Framework and a plethora of tools to build collective efficacy (self-assessments, high-leverage questions, action advice, and more), school and district leaders—as well as teachers, teacher leaders, instructional coaches, and other staff—can close persistent opportunity gaps and reverse longstanding patterns of low achievement.

The United States is among the wealthiest nations in the world, but it is far from the healthiest. Although life expectancy and survival rates in the United States have improved dramatically over the past century, Americans live shorter lives and experience more injuries and illnesses than people in other high-income countries. The U.S. health disadvantage cannot be attributed solely to the adverse health status of racial or ethnic minorities or poor people: even highly advantaged Americans are in worse health than their counterparts in other, "peer" countries. In light of the new and growing evidence about the U.S. health disadvantage, the National Institutes of Health asked the National Research Council (NRC) and the Institute of Medicine (IOM) to convene a panel of experts to study the issue. The Panel on Understanding Cross-National Health Differences Among High-Income Countries examined whether the U.S. health disadvantage exists across the life span, considered potential explanations, and assessed the larger implications of the findings. U.S. Health in International Perspective presents detailed evidence on the issue, explores the possible explanations for the shorter and less healthy lives of Americans than those of people in comparable countries, and recommends actions by both government and nongovernment agencies and organizations to address the U.S. health disadvantage.

The winners of the Nobel Prize in Economics upend the most common assumptions about how economics works in this gripping and disruptive portrait of how poor people actually live. Why do the poor borrow to save? Why do they miss out on free life-saving immunizations, but pay for unnecessary drugs? In *Poor Economics*, Abhijit V. Banerjee and Esther Duflo, two award-

winning MIT professors, answer these questions based on years of field research from around the world. Called "marvelous, rewarding" by the Wall Street Journal, the book offers a radical rethinking of the economics of poverty and an intimate view of life on 99 cents a day. Poor Economics shows that creating a world without poverty begins with understanding the daily decisions facing the poor.

What circumstances or behaviors turn poverty into a cycle that perpetuates across generations? The answer to this question

carries especially important implications for the design and evaluation of policies and projects intended to reduce poverty. Yet a major challenge analysts and policymakers face in understanding poverty traps is the sheer number of mechanisms—not just financial, but also environmental, physical, and psychological—that may contribute to the persistence of poverty all over the world. The research in this volume explores the hypothesis that poverty is self-reinforcing because the equilibrium behaviors of the poor perpetuate low standards of living. Contributions explore the dynamic, complex processes by which households accumulate assets and increase their

productivity and earnings potential, as well as the conditions under which some individuals, groups, and economies struggle to escape poverty. Investigating the full range of phenomena that combine to generate poverty traps—gleaned from behavioral, health, and resource economics as well as the sociology, psychology, and environmental literatures—chapters in this volume also present new evidence that highlights both the insights and the limits of a poverty trap lens. The framework introduced in this volume provides a robust platform for studying well-being dynamics in developing economies.
