The world's preeminent authority on Chinese science explores the philosophy, social structure, arts, crafts, and even military strategies that form our understanding of Chinese science, making instructive comparisons along the way to similar elements of Indian, Hellenistic, and Arabic cultures. A major portion of the book concentrates on Taoist alchemy that led not only to the invention of gunpowder and firearms, but also, through the search for macrobiotic life-elixirs, to the rise of modern medical chemistry.

While the historic roots of clinical chemistry originate from the chemical sciences the growth of the subject has been dependent upon the political, social, economic and technologic national soil in which it has developed. Thus the present leaders in this field have backgrounds variously in chemistry, medicine, pharmacy or sometimes biology. Today, clinical chemistry has attained stature as a unified independent discipline. It is characterized by active and productive international and national societies; its function codified in the law of many countries; its scientific content the sole subject of international and national journals as well as textbooks and educational programs; and its international, regional and national meetings have become focal points for major exchange of scientific, clinical and technical information and exhibition. The positive impact of the discipline upon

the delivery of health care has given it a significant position in the economics of public health. As a consequence it has become the most rapidly-growing segment of the industrial and commercial component of health maintenance. These changes have brought the need to define the educational and training processes to prepare future leaders of clinical chemistry. The diverse backgrounds of the present directors of clinical chemical laboratories has required that the viewpoints of chemists, pharmacists, physicians and biologists be brought into harmony. This has been achieved by the years of discussion, debate and review by colleagues of varied professional backgrounds. This monograph reflects their consensus viewpoint for the practice of clinical chemistry at its most advanced level.

Clinical Anaesthesia Lecture Notes provides a comprehensive introduction to the modern principles and practices of anaesthesia for medical students, trainee doctors, anaesthetic nurses and other health professionals working with anaesthetists. This fifth edition has been fully updated to reflect changes in clinical practice, guidelines, equipment and drugs. Key features include: • A new chapter on the roles of the anaesthetist • Increased coverage of the peri-operative management of the overweight and obese patient, as well as an introduction to the fundamental aspects of paediatric anaesthesia • Coverage of recent developments within the specialty, including the rapidly growing recognition of the importance of non-technical skills (NTS), and the management of some of the most common peri-operative medical emergencies • Links to further online resources • A companion website at [www.lecturenoteseries.com/anaesthesia](http://www.lecturenoteseries.com/anaesthesia) featuring interactive true/false questions, SAQs, and a list of further reading and resources Full-colour diagrams, photographs, as well as learning objectives at the start of each chapter, support easy understanding of the knowledge and skills of anaesthesia, allowing confident transfer of information into clinical practice.

The monograph provides the first comprehensive, detailed account of German-speaking refugees in Ireland 1933-1945 - where they came from, immigration policy towards them and how their lives turned out in Ireland and afterwards. Thanks to unprecedented access to thousands of files of the Irish Department of Justice (all still officially closed) as well as extensive archive research in Ireland, Germany, England, Austria as well as the US and numerous interviews it is possible for the first time to give an almost complete overview of how many people came, how they contributed to Ireland, how this fits in with the history of migration to Ireland and what can be learned from it. While Exile studies are a well-developed research area and have benefited from the work of research centres and archives in Germany, Austria, Great Britain and the USA (Frankfurt/M, Leipzig, Hamburg, Berlin, Innsbruck, Graz, Vienna, London and SUNY Albany and the Leo Baeck Institutes), Ireland was long neglected in this regard. Instead of the usual narrative of "no one was let in" or "only a handful came to Ireland" the authors identified more than 300 refugees through interviews and intensive research in Irish, German and Austrian archives. German-speaking exiles were the first main group of immigrants that came to the young Irish Free State from 1933 onwards and they had a considerable impact on academic, industrial and religious developments in Ireland.
